Microsoft

- Windows 10 x64
- Windows 11 x64

UITool

- Feature:
 - Always request account status before retrieving an SSA cert
 - To circumvent getting hard to understand errors from the BE
 - Added an About screen Request a new SSA cert after each new authSessionID creation
 - Update UITool and Virtual Reader in case SSA cert is different from the previous one
 - UTF8 support
 - UITool App name is now shown in the PIN dialog
- Bug Fixes:
 - UITool pinpad reader cancellation
 - Now forces the user to cancel on the PINpad reader
 - same eID card was sometimes shown twice
 - Crash on removing eID card from pinpad reader
 - account creation for previously aborted account creation (in step 2/3)

Virt Reader

- Improved handling of connect/disconnect events following each other immediately

Release Date: 19/12/2025

 - Error codes defined and implemented
- Bugfix:
 - Freezing of the agreement screen during the onboarding

Release Date: 02/12/2025

Supported Operating Systems

Windows NSIS Installer 5.1.27.6271 (v1.02) is supported on the following operating systems:

Microsoft

- Windows 10
- Windows 11

UITool

- Feature:
 - Display reasons why user isn't allowed to create on account Improvements
 - Support for cansign()
 - Show a user who is not allowed to create a signing account, the reason (in the OS language)
 - Progress bar in waiting screen when reading from eID card
 - Support for hashes longer then keysize also in UITool (was already fixed in minidriver)
 - Define and implement error codes that reveal where the error occurred
 - Error messages were model dialogs before, and needed to be closed by the user, now they disappear automatically when the UITool finishes a flow
 -
- Bug Fixes:
 - UITool Crash when shutting down PC
 - Some dialogs were freezing
 - Some dialogs were always staying on top
- UITool improvement:
 - retry writing to named pipe in case of failure

NSIS Installer

- Virt Reader - improve uninstall

Release Date: 02/12/2025

Supported Operating Systems

Middleware 5.1.27.6269 (v1.01) is supported on the following operating systems:

Microsoft

- Windows 10
- Windows 11

UITool

- Feature:
 - Added support for the canSign() feature, creating an specific error message for users that are not eligible to create an account
 - Added the reason text to the canSign(feature)
 - Scrollbar no longer disappears when going from 4 to 3 eID cards
- UITool improvement:
 - Added a screen with scrollbar when reading out eID cards
 - Renamed the 'exit' menu item to 'restart'

NSIS installer

- Feature:
 - No longer use 'killtask' to end the running signtool from previous install, as malware scanners reported it as suspicious

Release Date: 21/11/2025

Supported Operating Systems

Middleware 5.1.24.6267 (v1.0) is supported on the following operating systems:

Microsoft

- Windows 10
- Windows 11

Minidriver

- Fixed issue when signing with MSWord
 - Corrected key length to allow MS Word to create hash of key length

UITool

- Bugfix:
 - Show correct error message when user enters wrong PIN
 - Scrollbar no longer disappears when going from 4 to 3 eID cards
 - We stop the flow when no authSessionId can be retrieved (stop at first server error)
 -
- UITool improvement:
 - When requesting a SSA certificate from Acrobat Reader, do not show the SSA certificate separately anymore, but directly let Acrobat display the entire cert selection list
 - Messages remain visible (greyed-out) on the screen when the UITool is communicating with the server. This in order to prevent 'gaps' between screens while the UITool is waiting for a server reply.
 - Taskbar menu provides selection menu to choose BE to connect to (default is int)
 - When showing the agreement.pdf in the onboarding flow, the WebView will always be webview2, no longer the Windows default. (Windows default could be the old webview, which opens Acrobat reader when clicking in the pdf)
 - Added a timeout on the PIN dialogs
 - Improved stability when working with multiple cards
 - Account deletion has an extra warning screen before the account gets deleted
 - Support for cookies (can be tested on int environment)

Virtual Reader

- capable of uninstall
 - uninstall takes 30 seconds
